Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

monoclonal antibody 13-1 heavy chain - mouse (fragment)
C; Species: Mus musculus (house mouse)
C; Accession: PC4436
R; Akashi, S.; Kato, K.; Torizawa, T.; Dohmae, N.; Yamaguchi, H.; Kamachi, M.; Haradi, Biochem: Biophys. Res. Commun. 240, 566-572, 1997
A; Title: Structural characterization of mouse monoclonal antibody 13-1 against a porp A; Reference number: JC5810; MUID:98063277
A; Reference number: JC444
A&AA>
C; Comment: This catalytic antibody has peroxidase oxidase activity. It is directed against immunoglobulin homology
C; Comment: This catalytic antibody has peroxidase oxidase activity. It is directed against immunoglobulin homology
F; 251-320/Domain: immunoglobulin homology **status predicted
F; 99/Disulfide bonds: interchain (to 98) **status predicted
                                                                                4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 8

Ig gamma 2b chain constant region - pig (fragment)
C;Species: Sus scrofa domestica (domestic pig)
C;Date: 21-Feb-1997 #sequence_revision 21-Feb-1997 #text_change 21-Jan-2000
C;Accession: 147160
R;Racskovics, I;Sun, J;Butler, J.E.
J;Immunol. 153, 356-3573, 1994
A;Title: Five putative subclasses of swine IgG identified from the cDNA sequence number: 147158; MUID:95015845
A;Reference number: 147158; MUID:95015845
A;Status: preliminary; translated from GB/EMBL/DDBJ
A;Roccession: 17318
A;Roccession: 17328
A;Roccession: 17328
A;Roccession: 17328

New humanized anti-Fas antibody, useful for treating or preventing e.g. inflammatory or autoimmune disease, induces apoptosis selectively in cells with abnormal Fas-Fas ligand systems

English. Claim 2 ; Page 174-176; 263pp;

Intortion describes a nover numerized anti-ras antibody-like molecule (I) that, induces apoptosis in cells with an abnormal Fas/Fas ilgand system by binding to Fas on the cells with an abnormal Fas/Fas ilgand system by binding to Fas on the cells with an abnormal Fas/Fas ilgand system by binding to Fas and prevents for anti-anemic, antidiabetic, anti-allergic, anti-arthritic, antiviral, immunosuppressive, thyronimetic, antiarteriosclerotic, cardiant and hepatropic activity. (I) induce antiarteriosclerotic, cardiant and hepatropic activity. (I) induce apoptosis by binding to cell surface Fas or inhibit it by competitive cinhibition of ligand binding. (I) are used to treat and/or prevent clubes exphematosus, Hashimoto disease, rheumatoid arthritis, graft versus host disease, Slorgen's syndrome, pernicious or hypoplastic anemia, Addison's disease, scleroderma, Goodpasture syndrome, Crohn's disease, autohimune hemolytic anemia, sterility, mysathenia gravis, multiple sclerosis, Basedow's disease, thrombopenia purpura, insulin dependent diabetes mellitus, allergy, arteriosclerosis, myocarditis, cardiomyopathy, glomerulonephitis, hepatisis (fulminant, chronic, viral (B), C or D) or alcoholic), and transplant rejection. (I) selectively inhibit apoptosis in normal cells but selectively induce it in abnormal cells. They bind to both human and murine Fas, so can be evaluated in mormal cells. They about the active site of Fas, i.e. they minic murine disease models. (I) act on the active site of Fas, i.e. they minic the attive ligand, do not induce liver disease, and have reduced risk of inducing a human anti-murine antibody response. This sequence represents a humanised anti-Fas antibody heavy chain construct designated Heu 2 which is described in the method of the invention. This invention describes a novel humanized anti-Fas antibody-like

chain of murine anti-human Fash monoclonal antibody HFETA. It includes humanising R44G and A76T amino acid substitutions that are includes humanising R44G and A76T amino acid substitutions that are conserved in the human Ig6 heavy chain. Host Escherichia coli pythophy3 SANK 70298 harbors plasmid pythophy3 carrying a fusion fragment of the humanised HV type HFETA heavy chain and DNA concoding human Ig61 constant region (see AAV70080), and is deposited as FERW BP-6273 (claimed). The invention provides methods for producing humanised antibodies by culturing host cells. Humanised of inducing apoptosis in abnormal cells expressing Fas, and of inhibiting Fas-induced apoptosis in normal cells. The humanised antibodies are used to evaluate, in animal models, treatments of diseases that involve FasyFas ligand interactions, and also to treat such diseases, including autoimmune disease (e.g. systemic lupus erythematosus, Hashimoto's disease, graft versus host disease, Solgreen syndrome, permitotious anaemia, Addison's disease, scleroderma,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New antibodies and proteins bind conserved epitope of Fas antigen used to evaluate drugs in animal models and to treat Fas-associated diseases e.g. autoimmune disease, allergy, atopy, arteriosclerosis, myocarditis, hepatitis and AIDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Goodpasture syndrome, Crohn's disease, rheumatoid arthritis, autoimmune haemolytic anaemia, sterility, myasthenia gravis, multiple scl rosis, Basedow's disease, thrombopenia purpura and insulin-dependent diabetes), allergies, atopy, arteriosclerosis, myocarditis, cardiomyopathy, glomerular nephritis, hypoplastic anaemia, hepatitis, AIDS and transplant rejection (all claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This is the amino acid sequence of the HV type humanised heavy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Kimihisa I;

The invention relates to compositions for the prevention or treatment or diseases caused by an abnormality in the Fas/Fas ligand system containing an anti-Fas antibody as the active component. The anti-Fas antibody is either the murine anti-human Fas monoclonal antibody HFETA. or a humanised version of HFETA containing identical CDRs (complementarity determining regions) to antibody HFETA. Via its interaction with Fas, the antibody of the invention acts as a modulator of apoptosis. The compositions of the invention may therefore be used in the treatment or prevention of conditions such as autoimmune diseases, allergy, atopy, arteriosclerosis, myocarditis, cardiomyopathy, glomerulonephritis, aplastic anaemia (panmyelophthisis), hepatitis, AIDS represent the heavy chains (or fragments thereof) of various humanised HFETA-derived anti-Fas antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Fas; antibody; human; anti-inflammatory; anti-anemic; antidiabetic; anti-allergic; anti-arthritic; antiviral; immunodulatory; cardiant; dermatological; immunosuppressive; thyrominetic; antirheumatic; anti-Fas; nephrotropic; antilnfertility; neuroprotective; antiarteriosclerotic; hephrotropic; humanized; apoptosis; systemic lupps erythematosus; Hashimoto disease; rheumatoid arthritis; graft versus host disease; Sjorgen's syndrome; anemia; Addison's disease; scleroderma; sterility;
